Director of Planning and Sustainability

BWSC Collection System

- 1,536 miles of sewer and drain pipes
- (156 miles combined, 710 miles sanitary, 670 miles storm drain)
- Sewers range from 8 inch to 108 inch
- Drains range from 12 inch to 240 x 186 inch
- 9 pump stations
- 586 outfalls total
- 201 tidegates
- 50,605 manholes

Inundation Model - Project Overview

1. Develop 2D model that will estimate and graphically display inundation information using most current projections available.
2. Model will allow identification of land area, buildings and roads impacted by major events.
3. Model can be used as an early warning tool to pre-evacuate potentially impacted areas.
4. Estimate the projected depth and duration of inundation
5. Estimate potential population impacted
6. Identify critical facilities impacted by inundation
7. Utilize model as a collaboration tool with other agencies with data available and accepted by other entities
8. Have the information Peer Reviewed by outside entity.

Coastal Stormwater Discharge Analysis - Project Objectives

- Identify BWSC infrastructure impacted by:
 - Sea level rise
 - Storm surge
 - Other adaptations (like Climate Ready Boston)
- Develop conceptual designs to ensure reliable stormwater discharge
 - Designs may include holistic “strategies”

Need to evaluate performance considering:

1 & 2: Rainfall and Sea Level Rise (“routine” conditions)

3: Storm surge (nor’easter or tropical event)

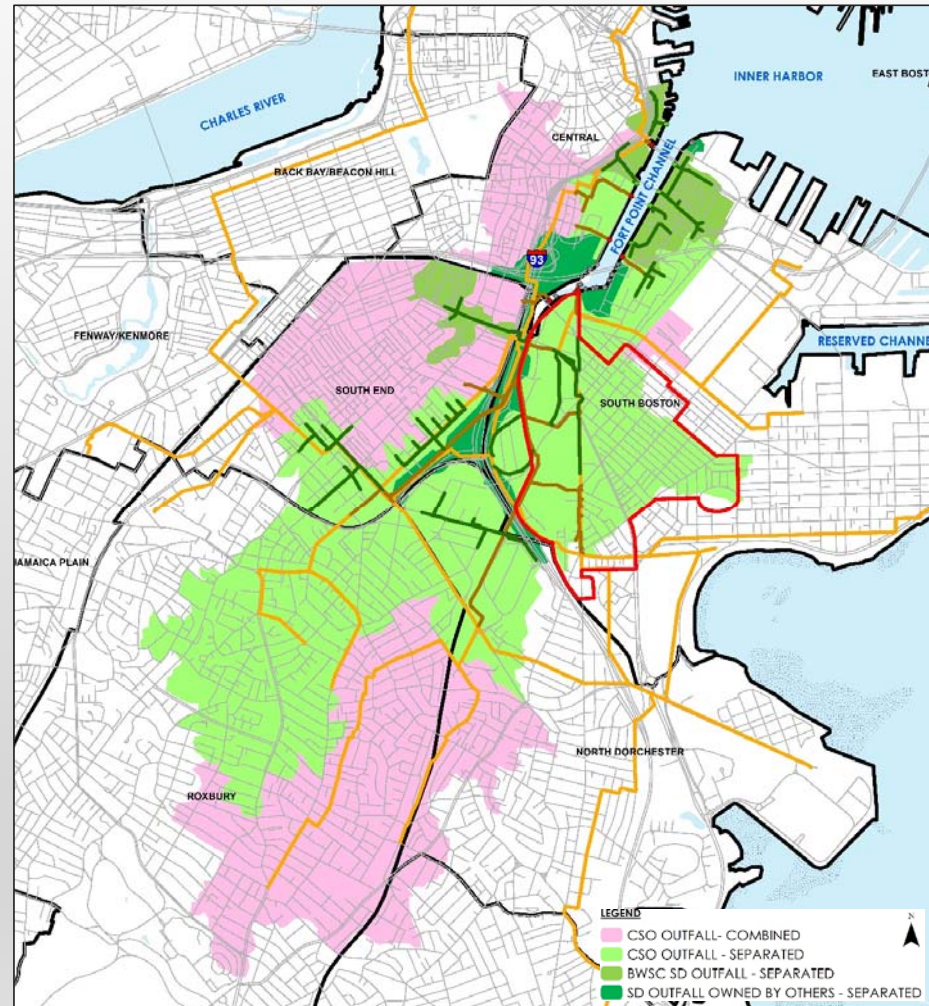

*Protect BWSC’s core function: **stormwater discharge***
